Claim 2; Fig 1; 27pp; French.

Chaim 2; Fig 1; 27pp; French.

Chaim 2; Fig 1; 27pp; French.

Chaim Ecott digest of formato DNA was screened with labelled tobacco nitrate reductase cDNA under low stringency conditions. A 6.5% fragment contained part of the tomato nitrate reductase gene and was used, under high stringency, to screen a Hind III library. A 7kb fragment was isolated, having 1.5kb in common with the Econi fragment. Restriction fragments were subcloned and sequence. The fragment. Restriction fragments were subcloned and sequence. The known nitrate reductases from other plants, eg. Nicotiana, Solanum, Trifolium pratense, Cucumis sativus, etc., shows conserved regions. These have structural and/or functional importance and cred to be separated by variable regions, often hydrophilic, which sequence 911 AA,

Overexpression of nitrate reductase (NR) can stimulate the early development of plants, shortening the duration of the vegetative phase and causing earlier germination, flowering and ripening by about two weeks. Overexpression of NR can also cause the level of nitrate stored in a plant to be reduced, reducing risks to health and also possibly improving organoleptic qualities. The NR gene w introduced into plants by transforming a strain of Agrobacterium
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  R41757;
21-MAR-1994 (first entry)
Nitrate reductase Nia2 derivative.
Nitrate reductase, germination; flowering; ripening; development;
growth stimulation; Agrobacterium tumefaciens; nitrate.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Inducing over-expression of nitrate reductase in plants. - esp. by incorporation of foreign gene, for stimulating early development and reducing nitrate accumulation
                                                                                                                                                                                                                                                                                                                                                                                                                                       WPI; 91-024287/04.

Claim 10; Fig. 4; 32pp; English.

This sequence encodes the pre-form of an apo-protein. The pre-apo-
protein is translocated from a cytoplasmic cell region to a
periplasmic region where formation of process apo-protein and
conversion to halo-protein occur. The protein is expressed in the
cytoplasm of E. coli, especially fall and N4830-1. The apo-protein
is a cytoplasmic cytochrome, especially having a soluble core domain
of cytochrome-b5 of liver endoplasmic reticulum.
                                               This sequence encodes the pre-form of an apo-protein. The pre-apo-protein is translocated from a cytoplasmic cell region to a periplasmic region where formation of process apo-protein and conversion to halo-protein occur. The protein is expressed in the cytoplasm of E. coli, especially TB-1 and N4830-1. The apo-protein is a cytoplasmic cytochrome, especially having a soluble core domain of cytochrome-b5 of liver endoplasmic reticulum.

Disclosure; Page 30-33; 45pp; English.
Providing the gene (1) encoding delta-6-desaturase, allows prodn. of transgenic organisms which contain functional delta-6-desaturase and which produce gamma-linolenic acid (GLA). In addition to allowing prodn. of large amts. of GLA, a new dietary source of GLA is provided. Chilling tolerance may be introduced in plants by introduction of (1) into a plant cell and regeneration of a plant with improved chilling resistance from the transformed plant cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                 Genetic precursor unit causing periplasmic translocation of pre-apo-protein of prevences of processing the halo-protein, useful in protein synthesis, assay of signal peptidase and identification of its inhibitors of its inhibitors.

This sequence encodes the pre-form of an apo-protein. The pre-apo-protein is translocated from a cytoplasmic cell region to a periplasmic region where formation of process apo-protein and conversion to halo-protein occur. The protein is expressed in the cytoplasmic cytoplasmic cytoplasmic cytoplasmic cytoplasmic sepecially TB-1 and N4830-1. The apo-protein of cytoplasmic cytochrome, especially having a soluble core domain of cytochrome-b5 of liver endoplasmic reticulum.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  91

Loud out gamma innolenic acid and having increased resistance to chilling Disclosure; page 48-49; 75pp; English. Synechocystis sp. PCC 6803 delta-6-desaturase (R98456) catalyses the conversion of linoleic acid to gamma-linolenic acid (GLA). It sequence was deduced from that of the delta-6-desaturase gene (T30396) isolated from a Synechocystis cosmid genomic library. The sequence is distinct from that of borage delta-6-desaturase (R98455). Expression of the desaturase in bacteria, fund, animals or plants results in increased GLA prodn. Alteration of the desaturase may result in increased resistance to chilling. Sequence 359 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               dene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          W24114;

This sequence represents the fructosyl amino acid oxidase (FAOD-P) of the invention. This sequence was isolated from Penicillium janthinellum 5.3413 (FERM BP-5475). FAOD-P oxidises amadori compounds in the presence of oxygen, producing alpha-ketoaldehyde, amine derivatives and hydrogen peroxide. FAOD-P is used in the detection of amadori compounds in, e.g. foods such as soy sauce, and in body fluids such as blood. This sequence, vectors containing it and host cells transformed by the vector are all sequence 437 AA;

Interleukin-4 signal transducer and activator of transcription (IL-4 star) (R88320) is a movel transcription factor characterized by selective binding to intracellular domains of cytokine receptors. It was obtd. by expression of a cDNA clone (T03679) isolated from human monocytic Thp-1 cells. The IL-4 Stat peptide is used to identify cpds. useful in the treatment/diagnosis of immune diseases, bacterial, viral or fungal infections, metabolic or genetic diseases, neoplasia, inflammation etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      IL-4 signal transducer and activator of transcription (IL-4 Stat) peptide(s) - bind to natural intracellular IL-4 Stat binding target and are useful to identify cpds. for treatment and diagnosis of

Disclosure; Fig 21(1-3); 313pp; English. Encoding enzymes from Ervinia herbicola There are a total of six relevant genes in a 7900 bp region that cause E. coli cells to produce GGPP and the carotenoids phytoene through zeaxanthin diglucoside, which is the final prod. identified in the carotenoid pathway contd. in plasmid paRC376 (contg. a ca. 13 kb chromosomal DNA fragment isolated by Perry et al., J. Bacteriol., 168:607 (1986). The genes for geranylgeranyl pyrophosphate (GGPP) synthase, phytoene synthase, phytoene dehydrogenase-4H. lycopene cyclase, beta-carotene hydroxylase, and zeaxanthin glycosylase are represented in Q13716, Q13719, Q13722, Q13724 and Q1372
                                                                                                                                                                                                                                                                                                                  semdrvp-fvvaervpwekmcetlnlkfmaevgtnrgllp-ehflflagkifndnslsme 490

At the 5' end of the gene, codons encoding the native second and third amino acid have been changed from Leu-Val to Val-Leu. Recombinant expression plasmids can be used to produce ants. of the enzymes and hence large amts. of the carotenoids which they
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Score 102; DB 15; Length 847;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Location/Qualifiers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Homo sapiens (human)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ID AC DE CONTRACT OF SERVICE S

No responsibility of the property of the protein of the fragment, but inflammation, myocardial infarct, etc.

To diagnosis and control of complement-related immune defects, inflammation, myocardial infarct, etc.

Tin inflammation, myocardial infarct, etc.

This is full-length CRI protein, and shortened forms are new, lacking the transmembrane region. The proteins and fragments bind C3b and/or C4b, have cofactor activity and inhibit C3 and C5 convertase activity.

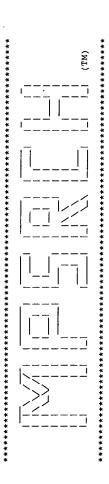

In the sequence, x=untranslated region. This has 7 short consensus repeats (CR) of 4 long direct homologous repeats (LHR) (see fig. 10 in patent). Deletion mutants, eg LHR-A for binding of C4b, and LHR-C for C3b binding, be made, and LHR-B and -C can detect CR2 sequences. They are useful in diagnosing and treating immune disorders, and prevent perfusion injury.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            2192 nyatyxxpllifxfifcl-ssftyvff-yirtfpplvcfllfyra-epysfkgf-rvkym 2247
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   peptide. The extreme carboxy-terminal part comprises a region of 20 hydrophobic AAs, which presumably serves as a transmembrane anchor. The FIPV peplomeric protein has 35 potential glycosylation sites, of which 22 are in the N-terminal part (pos. 1-790) which corresponds to the S-part of the IBV E2 (see P01183). N.B. IBV = infectious bronchitis virus. "X" in the AA sequence denotes the translation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         208 DYDPDLQHIPVFAVSTRLFNSITSVFYGRVLKFDEVARFLVSYQHWTYYPVMIFGRVNLF 267
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Weel for feline infectious peritonitis virus - and gene prod. useful as antigenic protein for vaccine Disclosure; Fig 1; 13pp; English. Disclosure; Fig 1; 13pp; English. obtain 79-1146. N81533 gives the sequence of the peptomeric gene in three reading frames. The top reading frame is an open reading frame of 4356 nucleotides and has a coding capacity for a precursor polypeptide having a mol. wt. of 160,470 (1452 AAs). The beginning and the end of the E2 gene are indicated in the FT of N81533. The first 18 N-terminal AAs have a strong hydrophobic character and presumably comprise a cleavable signal

Patent No. 5743141
GENERAL INFORMATION:
APPLICANT: CUNNINGHAM JR., FRANCIS X.
APPLICANT: SUN, ZAIREN
TITLE OF INVENTION: GENES OF CAROTENOID BIOSYNTHESIS AND
TITLE OF INVENTION: METABOLISM AND A SYSTEM FOR SCHEENING SUCH GENES
NUMBER OF SEQUENCES: 21
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  211 PDLQHIPVFAVSTRL-FNSITSVFYGRVLKFDEVARFLVSYQHWTYYFVMIFGRVNLFIQ. 269

Patent No. 568438
GENERAL INFORMATION:
APPLICANT: Ausich, Rodney L.
APPLICANT: Brinkhaus, Friedhelm L.
APPLICANT: Mukharji, Indrani
APPLICANT: Proffitt, John H.
APPLICANT: Yarger, James G.
APPLICANT: Yen, Huei-Che B.
TITLE OF INVENTION: Blosynthesis of Zeaxanthin and
TITLE OF INVENTION: Glycosylated Zeaxanthin in Genetically Engineered Hosts
NUMBER OF SEQUENCES: 104
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      99 NEMSRSGIFEKKGHHIMWTFVGVAVMMAAI-VYGVLASESVGVHMLCGALLGLLWIQAAY 157

Wilkinson, J.Q.; Crawford, N.M.
Mol. Gen. Genet. (1993) 239:289-297
Identification and characterization of a chlorate-resistant mutant of Arabidopsis thaliana with mutations in both nitrate reductase structural genes NIA1 and NIA2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           A new locus (NIA1) in Arabidopsis thaliana encoding nitrate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Cheng, C.; Dewdney, J.; Nam, H.; den Boer, B.G.W.; Goodman,
